New Partners for Smart Growth February 4, 2012

# **Planning for Solar Energy**

# **SunShot Initiative**

The U.S. Department of Energy SunShot Initiative is a collaborative national effort to reduce the cost of solar energy by about 75% before the end of the decade. To aggressively drive innovation and make large-scale solar energy systems costcompetitive with other forms of energy, the U.S. Department of Energy (DOE) is supporting efforts by private companies, academia, and national laboratories to reduce the cost of solar electricity to about \$0.06 per kilowatt-hour. Part of DOE's larger effort to make solar energy more accessible and affordable, the SunShot Initiative will enable solar-generated power to account for 15%–18% of America's electricity generation by 2030.

# How is the adoption of solar energy related to smart growth?

- Can support smart growth goals
- Integrate on existing buildings
- Helps preserve open space & critical environmental areas

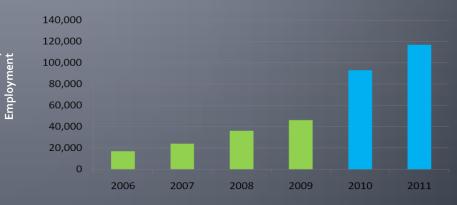

# How is the adoption of solar energy related to smart growth?

Integration into climate change, energy, and other sustainability goals and use to create local clean technology jobs.

# What are perceived barriers to solar energy adoption?

Chad Laurent, Meister Consultants Group

# **Perceived Barriers**

- It's not sunny enough where I live
- Solar takes up too much land
- I should wait because a better technology is around the corner
- It's way too expensive

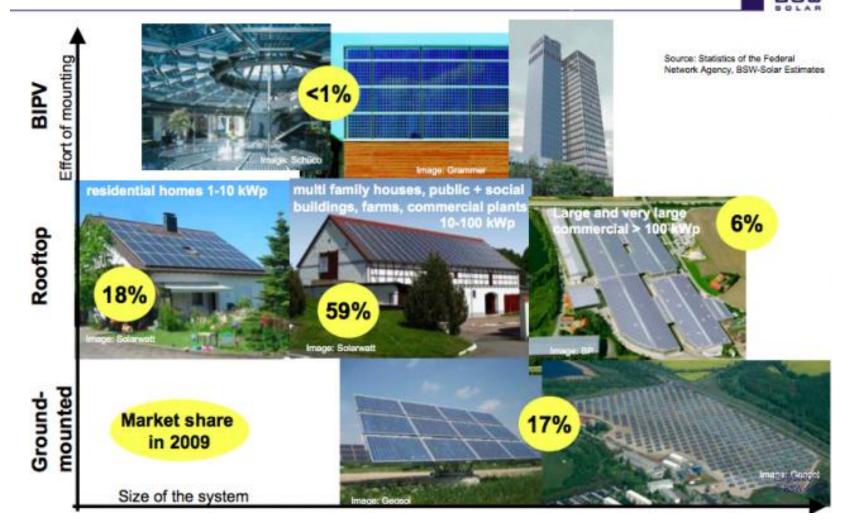

# **Perceived Barriers**

- It's not sunny enough where I live

HDR February 9, 2010

Implement a solar act ordinance

# What are actual barriers to solar adoption?

Chad Laurent, Meister Consultants Group

### It's unusual to pay for 25 years of electricity up-front

- Up-front cost for residential PV systems can be between \$5,000-\$15,000 after rebates and incentives.
- I might not stay in my home long enough for the system to payback.
  6-15 year payback might seem too long.

### Can I Even Put Solar on My Roof?

- Expensive roof repairs?
- Electrical upgrade?
- Getting everything up-to-code?

Panels on hurricane damaged roof in Florida. From One Block off the Grid: http://ibog.org/yes-solar-panels-can-survive-a-hurricane/

# Can I Connect to The Grid?

- Ground level disconnect?
- Can I get netmetering?
- Interconnection costs?

### **Freeing the Grid**

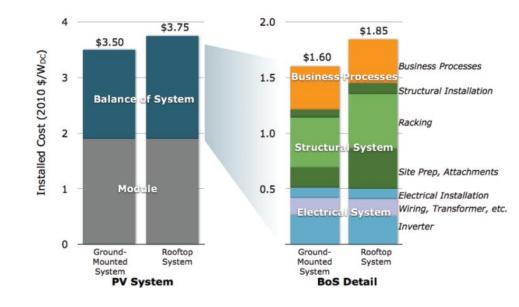

Best Practices in State Net Metering Policies and Interconnection Procedures

# **Complex Permitting Processes**

- Special permit requirements?
- Fire setbacks?
- Multiple permits and inspections
- Permitting delays
- Local building officials unfamiliar with the technology or local installers

# How can barriers to solar be addressed in zoning codes?

Suzanne Rynne, American Planning Association

# **Zoning Codes**

- Typically seen as barrier to solar implementation
- Can be *opportunity* to easily, efficiently incorporate solar with clear provisions

**Remove barriers** 

Enact standards

**Create incentives** 

# **Enabling Solar Installations**

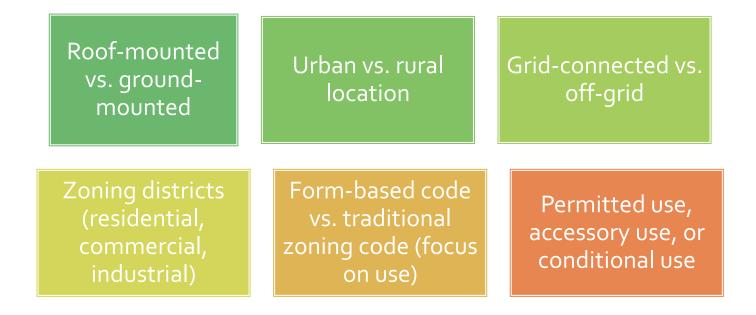

Encourage solar-oriented lots

Maximize solar access

Permitted use in zoning districts

What would be some key considerations when drafting a zoning ordinance?

## Considerations When Drafting *Provisions*

## Consider What *Standards* May Be Needed

Height
Setback
Visibility
Coverage
Plan approval
Aesthetic conditions
Safety conditions

## How can barriers to solar and historic preservation be addressed ?

Kimberly Kooles, North Carolina Solar Center

## **Update Preservation Policies**

- Historic preservation and sustainability goals are not mutually exclusive
- Move away from a culture of saying "NO" to a discussion of "How?"

## **Outreach and Education**

- Work within communities to educate property owners on local preservation policies
- Be adaptive to your community's unique historic culture and sustainability goals
- Consistently train and educate commissioners

## What are key considerations for installing solar on historic properties?
